

Awareness Training

With deceptively authentic-looking phishing emails, one accidental click by an employee has the potential to give a hacker access to your corporate network. Human vulnerability is one of the greatest security risks, but can be easily addressed through proper awareness and training.

At Arco IT, we want to help you prevent cyber attacks before they occur. That means, in addition to having the right technology in place, a key component of your cyber defense strategy should be vigilant training for your staff on the methods hackers commonly employ.

Your team isn't just another layer of security, they are the first line of defense. Empower them to clearly recognize and avoid the most common cyber threats, such as phishing and social engineering.

A 3-STEP PROCESS

Through best-in-class e-learnings, videos, simulations and campaigns, your employees will know what to look for and how to react.

1. SETUP

We'll handle the complete technical integration of the platform, customize the content for your organization and monitor the campaigns for issues.

2. TRAIN

We determine how vulnerable your users are to cyber attacks through an initial simulated phishing campaign. Phishing, smishing, vishing? Your team will learn the difference, as well as how to avoid these hacker tactics through fully automated campaigns, videos, games, posters and newsletters.

3. ANALYZE

Following the campaigns and simulations, we provide you with detailed reports, statistics and recommendations for the next iteration. You'll have solid proof of your team's awareness of and improved ability to avoid cyber attacks.

WHAT YOU CAN EXPECT

Your time and resources are valuable, so we won't waste them. Our security awareness simulations and tools will help you quickly get your team up to speed and one step ahead of hackers. With well-trained employees, you minimize the risk of a phishing attack and reduce the associated system failures, data loss, reputational damage, and costs.

YOU BENEFIT FROM:

- ✓ An initial simulation to assess current vulnerability
- ✓ Access to over 3,000 simulation templates that are constantly updated
- ✓ The world's largest library for security awareness training in over 20 languages
- ✓ Detailed results to demonstrate improved awareness and competency of your users
- ✓ The comfort of having an experienced partner handle all the technical bits, planning and supervision for you
