

# CISO as a Service

*Safeguarding your business's information requires a significant amount of time and effort – from keeping your systems updated, preparing for a potential threat, to having difficult conversations regarding data protection and cyber security.*

At Arco IT we're happy to take on the Chief Information Security Officer (CISO) role for your business. Let us take a virtual weight off your shoulders by handling all planning, supervising, coordinating and controlling tasks for your information security measures.

Whether you're just looking for temporary guidance until you can fill a CISO role internally, or you would like to have an expert on board on a cost-efficient, part-time basis, we've got you covered.

## A 3-STEP PROCESS

The Arco CISO integrates seamlessly into your organization to monitor, improve and control activities in the security area.

### 1. ANALYZE

Coordinating the entire process, the CISO identifies security requirements based on your organizational goals. The CISO reviews the current setup in terms of people, processes and technology.

### 2. STRATEGIZE

Based on the initial analysis, the CISO helps define the IT security strategy together with all relevant stakeholders. The CISO coordinates with management to get approval and support for the required changes, highlighting all risks or areas of improvement.

### 3. EXECUTE

In cooperation with relevant departments and external partners, the CISO implements the approved strategy, controlling all security activities and ensuring a smooth execution. Throughout the process, the CISO provides transparency as to how the organization is developing and key changes to the threat landscape.

## WHAT YOU CAN EXPECT

With Arco IT as your CISO, your IT security system will be in the hands of a dedicated expert – an expert who is fully immersed and committed to the security of your organization. For us, it isn't just about providing system architecture solutions, but about adding value, insight and guidance across the board – both within your organization, as well as with external business partners. We'll take responsibility for all information security matters, so you can stay focused on running your business.

## YOU BENEFIT FROM:

- ✓ An effective internal control system (ICS)
- ✓ Clearer risk management policies
- ✓ Timely advice in critical situations
- ✓ A facilitator for challenging IT discussions among internal and external stakeholders
- ✓ Credibility and experience when facing industry regulators and auditors, e.g. FINMA
- ✓ Cost-savings, by only paying for the services required
