Monitoring Solutions

Threats to IT environments often occur on weekends and public holidays, when systems are left unsupervised. Thus, the earlier security incidents can be identified–through continuous monitoring, logging and alerting–the quicker you can get back to business as usual.

At Arco IT, we want you to be able to sleep easy, knowing that your systems are being monitored round–the–clock and threats are immediately addressed. We know that to continue working hard, your security monitoring solution needs to work even harder.

That's why we create and operate robust logging platforms that seamlessly integrate into your existing system to continually log, monitor and analyze all potential threats. No matter what time of day or what other priorities you have, you can be confident that your IT environment is supervised by security experts.

A 3–STEP PROCESS

With rigorous and thorough monitoring, security threats will have no place to hide.

1. CONFIGURE
We build a customized platform to log all security–relevant details and events; the platform seamlessly integrates into your existing IT infrastructure and key components (e.g. Active Directory, Firewalls, Endpoints, Antivirus, Microsoft Office 365, etc.).

2. MONITOR
Your system is monitored continuously for advanced and even yet–unknown attacks and you'll be alerted by us immediately if a threat is identified.

3. ANALYZE
When an attack is detected, the logs form a basis for targeted problem analysis and resolution. The log data is easily extracted and visualized in real time. Together with your IT department we can use the data to quickly and effectively resolve the threat.

WHAT YOU CAN EXPECT

We'll make sure that monitoring your IT infrastructure is intuitive and straightforward. In addition to a security monitoring solution that works 24/7, you'll have access to a competent and regionally–available contact person, skilled at analyzing and responding to threats.

YOU BENEFIT FROM:

- Seamless and straightforward integration and operation handled entirely by Arco specialists
- Proactive and unwavering protection against internal and external threats
- Cost–effectiveness flexibility and power of a cloud–based solution
- Early detection of potentially harmful activities to reduce outages, costs and reputational damage
- A team of professionals keeping a close eye on the monitoring systems to inform you as soon as action is needed
