

Security Assessments

Taking into account your Business Mission and Critical Processes, Arco IT helps you to define your security target state. We provide a complete picture of your current system and potential security threats while recommending the ideal strategy for adopting a security level that matches your company's business goals.

At Arco IT, we understand your organization needs to be prepared for the threat landscape. We evaluate the systems and procedures in place, and build an internal awareness of risks and mitigations.

HOW IT WORKS

Through our security assessments, we'll help you understand your security gaps and build a security strategy personalized to your organizational needs and the current threats you face.

1. INVESTIGATION

We conduct in-depth interviews with key IT stakeholders within your organization and run optional technical tests to assess the current level of security.

2. ANALYSIS

We perform a comprehensive analysis to evaluate your risks and identify potential areas for improvement.

3. RECOMMENDATION

We develop actionable recommendations, prioritizing the most vulnerable areas to address first.

WHAT YOU CAN EXPECT

For us, a security assessment isn't just a list of things to fix. Our assessments are like a custom blueprint for your business.

YOU BENEFIT FROM

- ✓ A clear overview of your security posture
- ✓ Identification of strengths, weaknesses and gaps in your current set-up
- ✓ A detailed action plan to strengthen your IT infrastructure
- ✓ A competent and committed team to support implementation
